Recent Software Development graduate with fundamental knowledge of software design, development, and testing. Experienced in Agile Development and successful working in team and self-directed settings. Proven ability to learn and implement new technologies.

WORK EXPERIENCE

Software Developer

Momentum Learning   2022

- 16-week full-stack coding bootcamp with an emphasis in Python, JavaScript, and deploying web application in Django
- Completed project-based assignments to learn software development skills and gain experience writing code in team projects and as an individual contributor
- Learned an additional framework for final project to implement React Native in mobile app development
- Utilized Trello to coordinate and communicate with team members during project development

Warehouse Specialist

Spoonflower   2015-2022

- Received and inventoried stock for the entire production facility as part of a two person team
- Developed new systems in response to increased demand and production
- Planned and organized the layout of a new warehouse location during expansion
- Collaborated with procurement to coordinate essential needs for projects while ensuring goods and services were in alignment with business standards

Team Supervisor

Barnes & Noble College UNCG   2008-2015

- Managed the ordering process to ensure the textbook inventory requirements were met each semester
- Provided guidance to customers and faculty on course materials and purchasing decisions
- Interacted with students, faculty, and publishers to handle adoption, selection, and buyback processes
- Redesigned the inventory system to streamline the ordering process

PROJECTS

Journeyal

github.com/Team-Journeyal

A mobile app developed in React Native and Django rest framework. Users can share calendars while adding events, journal entries and images to document their lives and keep record of cherished memories.
